

QUADONE
Simplying Technology

For High Quality
&
Cost Effective
Solutions

Quad One Technologies is an offshore software solutions company offering world class application and product development services. Our strengths are our technical expertise in making diverse technologies work together and our competence is in offshore software development for applications and products.

www.quadone.com

About Us

Quad One offers world class, cost effective software solutions and offshore development services for Application and Product Development companies around the world.

Our expertise lies in offshore product and application development and maintenance.

Outsourcing

Quad One provides an ideal partner for companies looking for outsourcing or offshoring solutions. Quad One has years of experience in developing cutting edge applications and products for customers overseas and in India. Quad One also has a specialty Microsoft team well experienced in .NET and VB/VC++.

Quad One offers multiple engagement models to meet diverse needs of our global clients. You can choose from any one the generally accepted models below or a combination of them.

- **Effort based pricing or Time & Material**
- **Milestone based billing**
- **Dedicated Development Facility or Retainer**
- **Project based pricing or Fixed bid**

Microsoft Technologies

Quad One has been working with Microsoft Technologies since its inception. We have maintained a strong focus obtaining and improving upon our Microsoft technical expertise.

We have a pool of professionals dealing in all the Microsoft technologies including .NET, VB, VC++ and VBA. Our Microsoft team has developed products in .NET, VB and VC++ which are standalone, web based and also hybrid in nature. The hybrid applications are VB, VC++ applications with interact with Web applications and also use some components of web architecture in their design.

Open Source

Quad One has been working with Open Source technologies for more then 4 years. We have been one of the early adopters of some of the open source processes which have become de-facto standards today. We have a pool of professionals dealing in all the Open Source technologies including PHP, Java, Perl and Linux. In fact we have customized Internet Explorer to work on Linux using some Open Source Standards. All of our developers work on Linux using the robust Open Source IDE, Eclipse and test the application on all the browsers from Mozilla to IE.

Quad One has expertise in the following well-known ready to deploy Open Source applications: readings are directly entered into the system.

- **Portal Frameworks - U-Portal (Java) / PHP-Nuke / Post-Nuke / Mojave / Mambo / Q1-Portal (Quad One's customized portal framework)**
- **Application Frameworks - Struts (Java)**
- **Build Tools - Ant (Java)**
- **E-Commerce - OS Commerce**
- **Search Engines - Lucene**
- **Issue tracking systems - Scarab / Bugzilla**

Services

Application Development

Quad One Technologies has been focusing on enterprise technologies and has strong teams in the broad areas of JAVA, MS (.Net, VB and VC++) and LAMP (Linux, Apache, Mysql / PostGreSql, PHP). Each of these teams have been involved in multiple projects for client in India and Abroad (predominantly in the US) building solutions that cater to our clients' needs. Most projects use a combination of technologies and heavily depend on XML and related technologies to form the glue between different technology components.

Most of our work also involves multi platform, multi-channel communication system with communication happening through email, SMS, fax, etc.

We have expertise in developing products and applications in Java, .NET, LAMP, VB and VC++ combined with XML on Windows and Linux. We have expertise in developing products and applications in Java, .NET, LAMP, VB and VC++ combined with XML on Windows and Linux.

Portal Development

We use our proprietary Enterprise Portal Framework for deploying dynamic portals for our clients in the shortest possible time. The framework takes care of user access and security allowing for easy integration with other components and for low maintenance.

All user and application security features are built in. Apart from these it several plug and play components are available which can be integrated into the portal.

1st Alerts News Network

1stAlerts News Network is a news syndication service implemented in PHPNuke with a .NET/VB/VC++ client which receives the news directly to the user's desktop. The site has been designed to support millions of users.

Domain Expertise

Pharmaceuticals

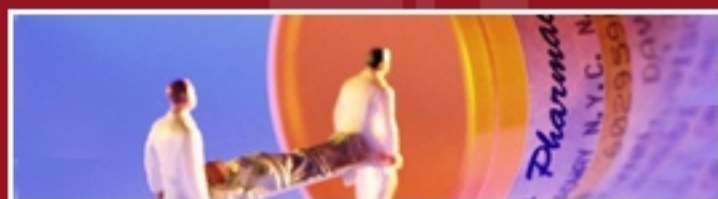

We are the first company in India to have built a completely integrated and online Clinical Trials Management Solution (Clinion™). This is a very unique solution with hybrid architecture with investigators capturing patient information through an offline application and synchronizing the

data at regular intervals to the central database for review by the Clinical Trial Sponsors.

A Bioequivalence System is currently under trial. This is an enterprise application which is integrated with Diagnostic devices so that the readings are directly entered into the system.

Health Care

Over the past one and half years, we have built a complete enterprise hospital management system with HL7 and other relevant standards to cater to the health care domain and our product (MediPulse™) has been implemented successfully in 3 hospitals and has been in use during the past 8 months. This product is built with a multitier, enterprise architecture with JAVA, J2EE and XML technologies. This product has successfully processed more than 130000 patient records over the last 8 months in one of the initial deployments. All the three hospitals are greater than 500 bed hospitals with about 800 op transactions each day.

To support our focus in the health care domain, we have HL7 Control experts who participate in various HL7 forums and different interest areas like openEHR, etc.

Technology Areas

Quad One Technologies has been focusing on enterprise technologies and has strong teams in the broad areas of JAVA, Microsoft (.Net, VB and VC++) and LAMP (Linux, Apache, Mysql / PostGreSql, PHP). Each of these teams have been involved in multiple projects for client in India and Abroad (predominantly in the US) building solutions that cater to our clients' needs. Many projects also use a combination of technologies and heavily depend on XML and related technologies to form the glue between different technology components.

Quality Process

The quality processes that we follow are based on iterative development methodologies like XP & RUP. Standards and Guidelines

We use Industry standards and guidelines (specified by ISO, CMM, ISACA, etc) to augment our experience with processes like XP, RUP, etc. and ensure that every project we deliver is of the best quality possible.

Our association with ISACA (Information Systems Audit and Control Association) has helped us to focus better on information system controls

especially in the perspective of our clients or other user organizations.

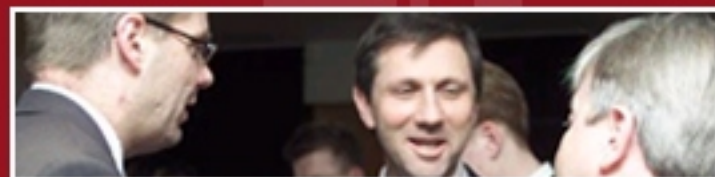

Partners

Quad One is actively forging partnerships with industry leaders whose products and services compliment our own architecture in their design.

Joint Development Alliance

In order to maximize our client's IT investment, Quad One is actively establishing joint development alliances with leading technology firms to either expand Quad One' product and service offering, or to jointly develop and introduce entire new solutions to the marketplace.

Marketing Alliance

Quad One is actively seeking to establish partnerships with Specialty Marketing companies to expand its reach into the domestic and International Markets in the field of product sales and software development.
